

## CONNECTING TO THE MONITORING APPHUB DATABASE IN ARCMAP

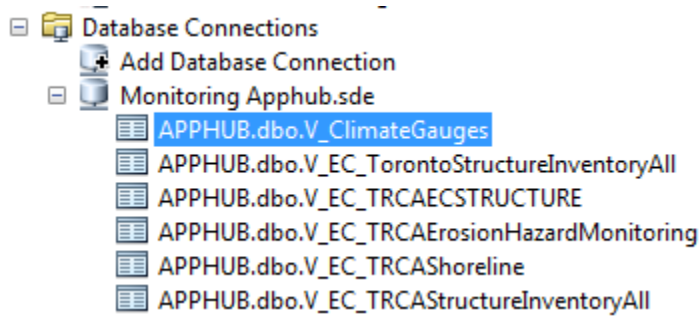

1. Open ArcCatalog
2. Go to Database Connections
  - a. Add Database Connection

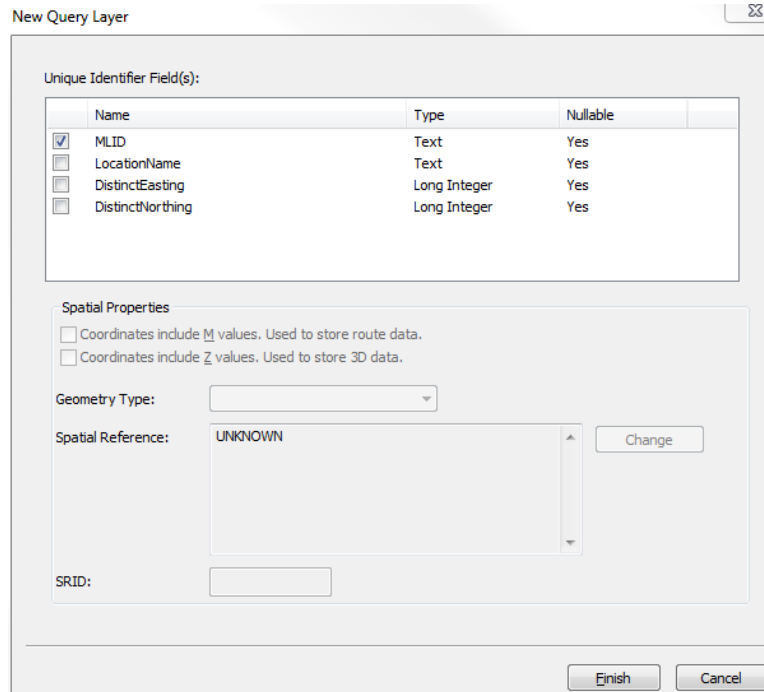

- b. Enter the following. User Name and Password are dbtest.

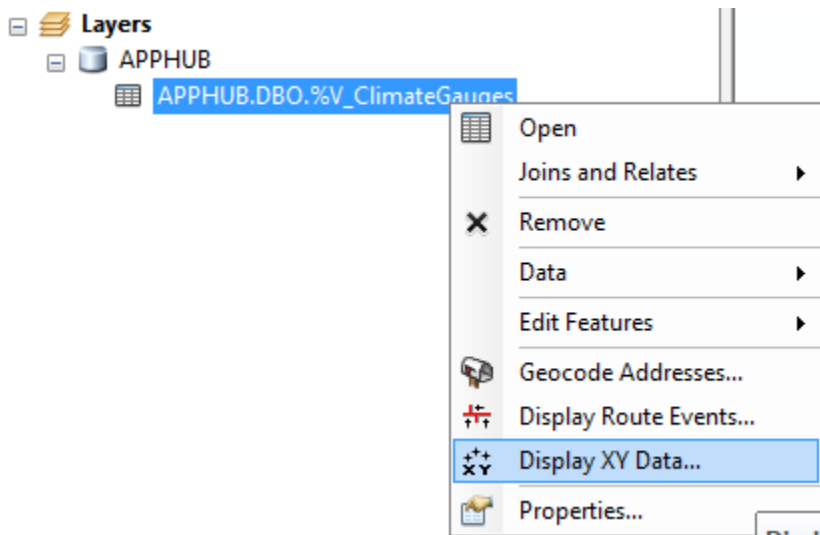

3. Select the APPHUB database
4. You can now see a new Database connection "Connection to 10.10.31.67.sde". Right click on this connection to rename it "Monitoring Apphub.sde"
5. Double click the new connection to display the tables inside.

- To view the data, drag a table into ArcMap. A new dialog box will open. This dialog will ask you to identify a unique id field for the table. This is required in order to be able to make selections or queries on the dataset. A unique id can be a combination on one or more fields.

- The Table should now appear in your TOC. Right click and select “Display XY Coordinates”

- Choose the field to be used as the X and Y, Lat and Long, or Easting and Northing Coordinates.
